

GRAFF presents its contemporary design, Qubic Collection

Feb 05, 2018

GRAFF, the worldwide manufacturer of innovative faucets and shower systems, introduces Qubic Collection. The collection includes a full offer of deck-mounted and wall mounted elements for the bathroom and the shower, including a shower column and several matched accessories.

QUBIC is manufactured in emptied brass, with a minimum level of nickel and lead, and realized in compliance with all drinking water regulations - as established by the company policy - fully satisfying the most restrictive criteria required for the protection of health and the environment. The range available in polished chrome, Steelnox® (satin nickel), black and white, - creates a cohesive bathroom suite. The whole collection can be viewed on www.graff-faucets.com

Sometimes simplicity is deceiving. Qubic could not reflect this concept any better. Polished and elegant, it represents an architectural element with a refined contemporary design. Square and cube-shaped, as already announced by its name, Qubic confers strength and stability to the sink and the bathroom as a whole. In the widespread 3-hole version - Qubic Tre- the collection is characterized by a different, thinner lever which runs as a distinctive point through the whole collection. Because of its characteristics and thanks to the top-quality finishes offered by GRAFF, Qubic has been chosen for several high-end projects such as the Capella Hotel in Washington D.C. and the 5-star Tannenhof Superior Hotel in Austria.

GRAFF President and CEO, Ziggy Kulig, comments: "The patented Steelnox® finish is 100% fingerprint-resistant while the white (WT) and black (BK) finishes are obtained through a powder coating process, that makes products resistant to scratches, chipping, abrasions, corrosion, fading, and other wear issues."
