

### DESIGNER TILES

Classic Marble Company (CMC) has launched a new product 'Village' in the large size porcelain tiles segment – Techlam. The designer tile Village reminisces with the old style deco; they are as much attractive in design as they are in function. Inspired from wood

grain and composed into a rich fusion of a variety of shapes and colours, the tile brings out the laid back, quirky charm of the country side. The versatility of the tile allows it to be used in interior and exterior floors and walls as well as in surfaces for countertops and tables, offering an endless number of application possibilities. Techlam tile is available in the standard format of 3,000 mm x 1,000 mm and has a thickness of only 3 mm. Contact: Classic Marble Company. ### VERSA'TILE'

Antica Ceramica has launched 'Allure' – its wooden series of verified tiles, that is a perfect mix of classiness and style that combine for a unique flooring experience. The range of tiles have the irresistible allure of wood with its rich patterns which have been replicated in this versatile tile material. They are available in 60 x 60 cm, 60 x 120 cm, 20 x 120 cm, in variations of 15 shades and innumerable design options. The tiles come with pristine base that has a high gloss mirror-like shine, which lets them remain cool. Contact: Antica Ceramica. Website: [www.anticaceramica.in](http://www.anticaceramica.in)

### ELEGANT FAUCET

GRAFF has come up with the Sospiro Collection, a new elegant kitchen mixer, a faucet line that furnishes the bar and kitchen spaces. The latest innovation offers a contemporary twist on traditional style. Inspired by the silhouette of a classic bridge, the faucet features clean, sleek, curvilinear lines, that fits perfectly inside modern kitchens and bars. It is offered both, as a single-hole and as a bridge model, and is available in four stunning finishes – polished chrome, brushed nickel, polished nickel, and olive bronze – to allow the widest flexibility in design. ### REAL-TIME DATA

FARO has announced the availability of the FARO Visual Inspect product family. This innovative platform enables large, complex 3D CAD data to be transferred to an iPad and then used for mobile visualisation and comparison to real-world conditions. This enables real-time, actionable manufacturing insight through earlier stage error detection in the production, construction or design processes. Visual Inspect is a true next generation solution as it moves 3D CAD viewing away from the traditional desktop PC to a mobile 'in hand, on demand' solution. Contact: Faro Technologies.
