

DRESSAGE GRAFF

GRAFF recently launched their most luxurious furniture collection for the bathroom. Dressage is harmony, geometry, versatility. The furniture variety is a carrying element in solid wood, compact and functional. The solid wood, warm and precious, is the mainstay of the collections. All elements of the water supply and water discharge are located inside, hidden from the eye. It can be combined with a washbasin in Corian® DuPont™ and solid wood and accompanied by a tray for cosmetics, a towel hook, a chest of drawers and a movable mirror. The bathtub is composed of a thermoformed Corian®

DuPont™ panel combined with solid wood. The angular cut all along its entire section creates an invitation for entering and an elevated area that allows one to stretch and relax. It is imagined to live in the center of a home space, in its free-standing version, with a headrest made of leather and a shelf for storing beauty products. The handcrafted style can also be observed from the presence of two other elements: the stool and clothes hanger. Each object is autonomous and versatile, but can be part of an overall picture which can be arranged gradually in time including the principal ambiances of the house

MALFOY RR Décor

RR Décor has unveiled its latest furnishing fabrics collection called Malfoy. Their collections are exclusively developed by their design department, with passion and innovation, inspired by art, and always in tune with fashion and design trends. Reinterpreting aesthetic design, Malfoy reinvents contemporary patterns in unique design, where

creativity is balanced in pure and refined colorful ranges. Softened geometric patterns complemented with high gloss metallic accents add luxury and glamour to the entire story, hence making it more versatile and easy to integrate into other styles.

OS2 Secco Sistemi

Versatile application is an important feature of doors and windows. A building plan communicates with the outside through the vertical cladding of the construction and the windows are a dominant aspect of this. Windows therefore, strongly characterise architecture and as a result the city and the area the building is situated in.

With this in mind, Secco Sistemi have extended, with the introduction of new materials and possible formats, the applicative possibilities of the OS2 window, launched a few years ago for the architectural restoration market and now also suitable for use in contemporary architectural

designs. The extended range includes a version in stainless-steel that has been added to those in brass, corten steel and galvanised steel, ideal for minimalist designs; new bimetallic versions that enable two different metal finishes to be used for inside and outside of the window to meet a range of stylistic requirements; a wide variety of architectural elevations able to conceal from view the openable elements or the option to highlight them and integrate flush and non-flush glazing; a new solution for the thermal break (now in polyamide and polyurethane) and finally, the extension of the range of profiles along with a complete set of accessories.
