Tankless electric water heaters

Tempra Plus tankless electric water heaters features Advanced Flow Control to automatically adjust the flow rate, if needed, in order to keep the output temperature constant and supply continuous hot water to the open draw-off points. Hot water needs vary between geographic locations and home to home. In general, all models 12-15 can run on a 100 amp incoming electric service, models 20-29 on a 200 amp service, with the 36 requiring a 300 amp service. Have an electrician confirm the system load capacities and panel space requirements. Besides the electrical, the optimum size depends mostly on the incoming water temperature and number/size of fixtures in the house. **STIEBEL ELTRON, INC.**

Hydronic filtration system

The Magnaclean Professional2 features a patented magnetic and non-magnetic filtration system that captures and removes the suspended iron oxide that collects in hydronic heating systems. Designed for 3/4" copper and 1" NPT iron pipework, the product is ideal for residential applications. Compact and easily fitted on the return pipe to the boiler/circulator via rapid-fit connectors. Quickly serviced using the unit's quick-release trigger, low-profile drain valve, and built-in air vent. Extends the operational life of the hydronic system. **ADEY.**

EP opposing-port tees

ProPEX engineered polymer (EP) opposing-port tees reduce the number of required fittings in a riser application. A solution for PEX hydronic heating and cooling applications with back-to-back installation spacing constraints, ProPEX eliminates the need for additional tees and elbows to facilitate piping in two directions,

reducing the number of required fittings by 75%. Available in 1", 1 1/4", 1 1/2" and 2" flow-through sizes with 3/4" outlets; listed to ASTM F1960 as well as NSF 14, and code-compliant with the International Mechanical Code (IMC) and Uniform Mechanical Code (UMC) for hydronic heating and cooling applications. **UPONOR.**

New York chic in faucets

The Targa and Solar collections decorate the bathrooms of the ONE57's apartments, in Central Park, offering modern style and comfort. The redesigned internal parts of the faucets allow them to be mounted on a thicker than usual surface. Solar, with its clean and simple lines, is characterized by a set of right angles and expressive geometric shape. Because of its design, the faucet becomes a sensorial, tactile and visual experience. Eco-friendly, its special aerator reduces the water flow from 11 to 7 liters per minute. Targa's slender, slightly convex handles accompany the spout, while the base and the faucet body form a modern and elegant shape, emphasized by its top standard finishes. **GRAFF.**
